

ThoroughCare AI INTEGRATION

AI-Powered Care Management for Enhanced Patient Engagement

ThoroughCare's advanced care coordination tools, integrated with CareCo AI technology, enable users to automate the process of initiating, receiving, recording, and transcribing calls with patients. This allows for more streamlined patient discussions to maximize the value of every interaction.

Care coordinators' call transcripts are combined with the patient's clinical history. Through workflow automation, these transcripts are analyzed and converted into actionable care plan task suggestions for the team to execute.

What We Offer

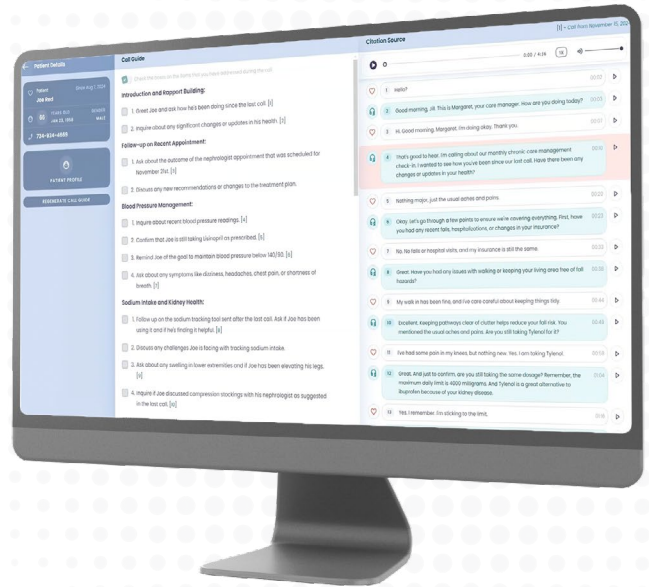

- Built-in or integrated Voice over Internet Protocol (VoIP) functionality
- AI-generated SMART goals and interventions posted directly to care plans in ThoroughCare
- Intelligent call guides with documented sources for all insights from transcribed calls

An intelligent co-pilot for care coordinators.

“ThoroughCare/CareCo AI enhances our work without removing the human element to patient care. Our team has seen a 25% increase in efficiency, which allows us to care for more patients. The conversations are more intentional and empathetic because we can trust CareCo to accurately transcribe and summarize the content.”

- Candace Stewart, Team Supervisor, 24OurCare

Automated Efficiency

Reduce administrative burdens with AI-generated call guides, transcriptions, and task lists, turning conversations into actionable outcomes.

Streamlined Care Planning

Utilize AI-generated care plan suggestions directly integrated into ThoroughCare's platform for improved workflow and decision-making.

Improved Patient Outcomes

Enhance care coordination and decision-making by empowering care teams with actionable insights and data-driven tools.

Seamless Integration

VoIP allows care managers to initiate, receive, and manage calls directly within CareCo, eliminating the need to switch between multiple systems or devices.
