

Health Data EXCHANGE

Connected Care Coordination

ThoroughCare's Health Data Exchange (HDE) bridges the gap between disparate technology systems, enabling interoperability to share vital patient information and data across providers, systems, and facilities.

By fostering seamless data communication and collaboration, HDE boosts productivity, enhances care quality, and supports a patient-centered approach to health management.

What We Offer

- Reliable and secure clinical network
- Integration with health information systems
- Near real-time data exchange
- Support for multiple data types

ThoroughCare's **Health Data Exchange** enables a reciprocal flow of patient information across health networks. This data includes ADTs, conditions, medications, lab results, procedures, and more.

Seamless Data, Smarter Care.

ThoroughCare's Health Data Exchange is designed to accelerate healthcare data interoperability by providing easy-to-use patient data at the point of care via API, embedded components, and direct EHR integrations.

Improve patient safety

Gain access to up-to-date information on patients' medical histories, leading to safer prescribing practices, better monitoring of chronic conditions, and timely interventions for potential issues.

Enhance clinical efficiency

Reduce risk of error during medical reconciliation, easily screen for gaps in care, and reduce the need to contact multiple providers for health information.

Reduce readmissions and engage patients

Receive notifications when patients are admitted to the hospital and set the groundwork for Transitional Care Management. Continue to monitor the patient's progress after discharge.

Provide patient-centered care

Access detailed patient data, allowing for personalized and targeted treatment plans based on individual patient needs, preferences, and previous responses to treatment.
